Caring for the world, one person at a time...

For more than 125 years, the Johnson & Johnson Family of Consumer Companies has stood for innovation that transforms the health and well-being of people around the world.

A trusted leader in the field of skin health, the Johnson & Johnson Family of Consumer Companies has more than 150 researchers in 49 countries working to deepen and expand scientific understanding. Because of this commitment to innovation and inquiry, we have published more fundamental and clinical research on adult and baby skin in the last five years than any other global health care company and continue to invest millions annually in research and development.

Our history of close partnership with the medical community has both helped set standards for skin care product safety and served as a foundation for further breakthroughs. Listening to patients and physicians, we work collaboratively to develop products that deliver a high level of efficacy and an aesthetic experience that makes compliance not just a possibility but a pleasure.

Our researchers know that optimum skin health goes beyond the topical application of even the best products. This is why we continue to explore the full spectrum of scientific possibilities, from cutting edge technologies and ingredients to the intricacies of cognitive and behavioral research.

Beyond creating skin care solutions that improve the quality of life for families everywhere, there is nothing more important to us than advancing dermatologic and cosmetic research and education. This is why we are proud to be a contributor to scientific and medical meetings worldwide.
